About CarryLane

CarryLane offers fixed-term carry strategies in crypto. You choose a product and term while the algorithm works with **premiums the market pays** for leverage, time and protection.

Every dollar is tracked across **four separate layers**: earnings, committed principal, fees and available balance.

The algorithm works **on weekdays**, while investors see their positions, accruals and available balance **in real time** — in one account.

The market pays for leverage, time and protection

Behind each of these is **a real payment**: one side pays it and the other receives it. CarryLane takes **the receiving side** and calculates what can reach investors after all costs.

LEVERAGE → FUNDING

Leveraged traders pay to maintain their positions **each funding interval**. As long as they maintain those positions, payments continue. CarryLane takes the other side and **collects the funding**.

Someone borrows money to trade with more capital and pays for it. We lend the money and receive the fee.

TIME → BASIS

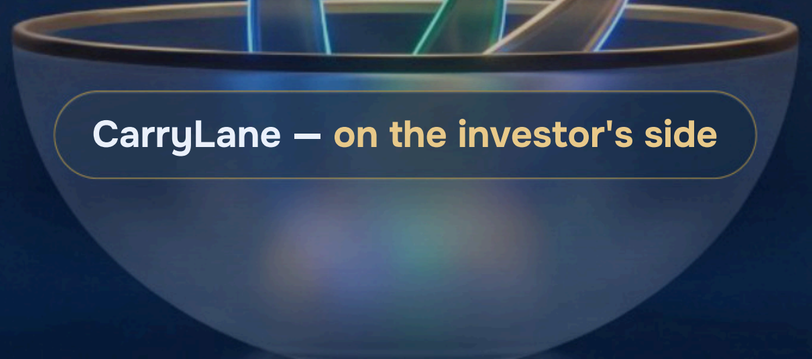

A futures contract specifies an asset's future price. It almost always costs **more than the asset today**. This gap converges to zero over time. The initial extra payment **becomes the strategy's result**.

The buyer agrees in advance to pay more. By maturity, the difference goes to the party that took the opposite side.

PROTECTION → PREMIUM

An option buyer pays for the right to limit their loss if the market moves against them. This payment, the premium, **goes to the seller immediately**. CarryLane takes the seller's side and **receives the premium**.

Someone pays for downside protection. We sell that protection and receive the premium.

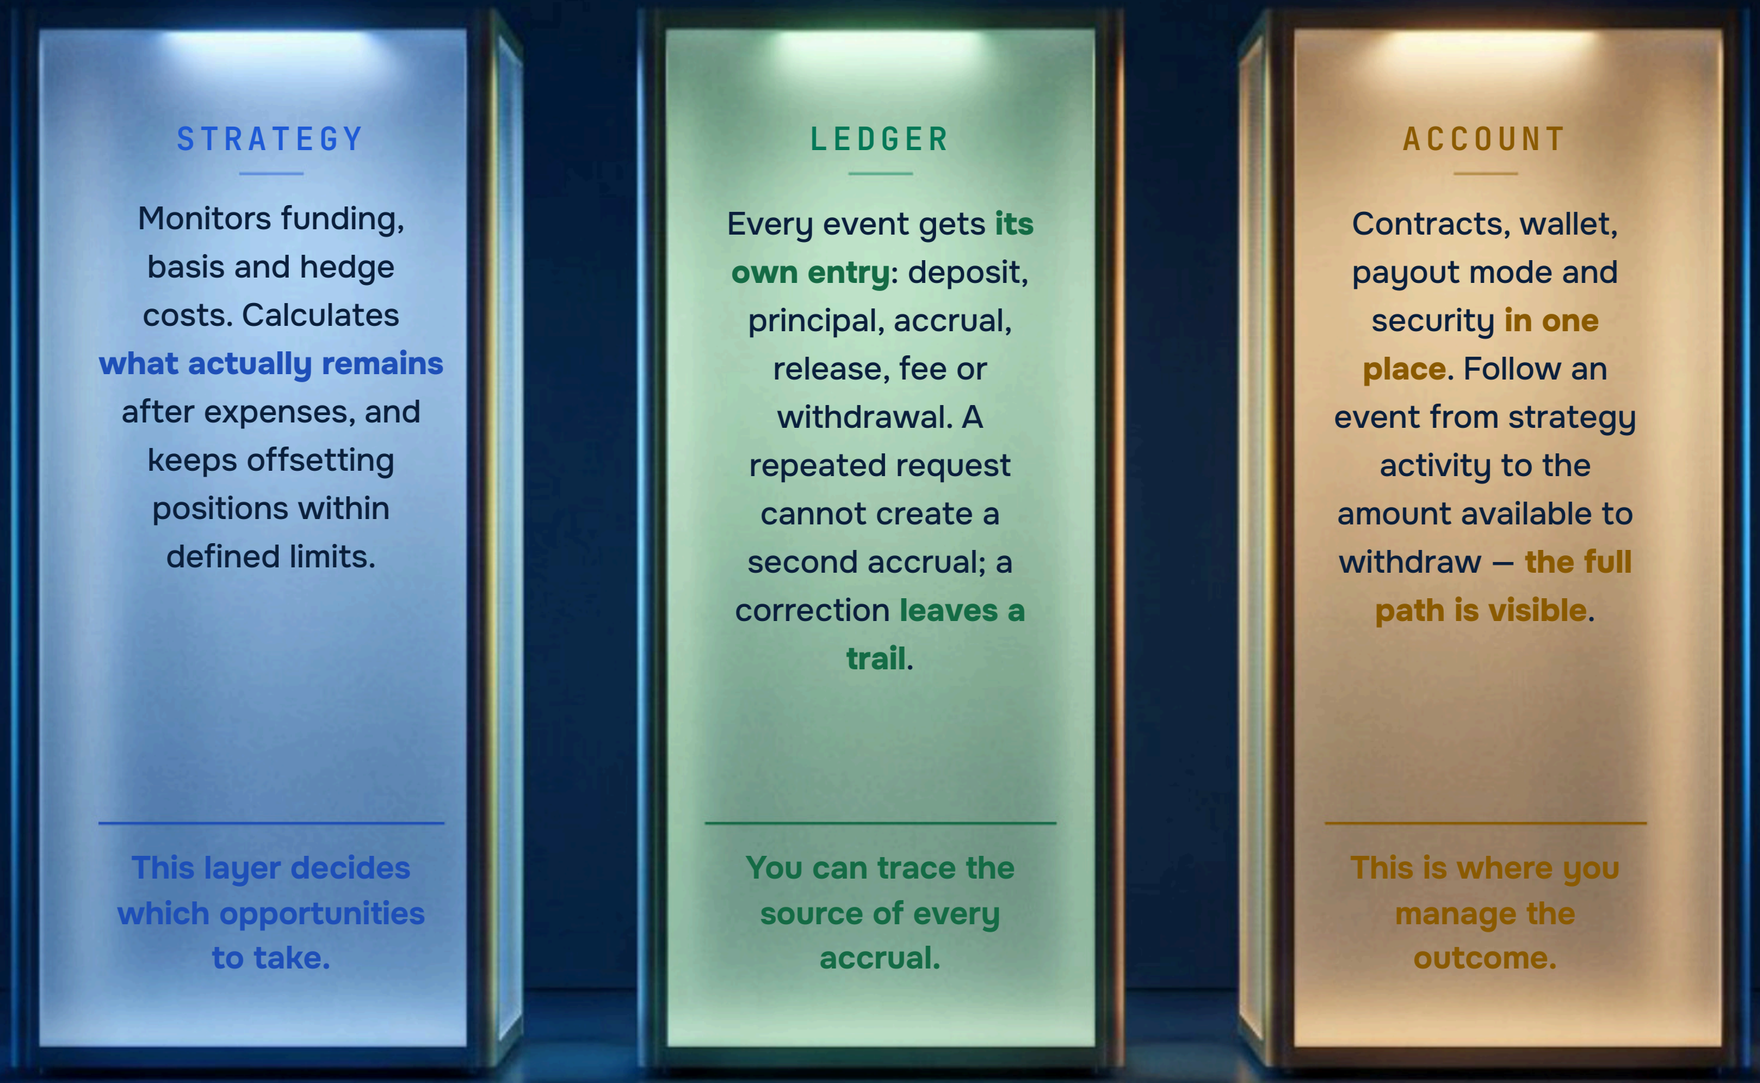

CarryLane — on the investor's side

Three layers that stay distinct

Market decisions, movement of funds and account access **remain separate**. An accrual does not replace committed principal, and the balance does not hide a fee.

Every correction **leaves an auditable trail**.

Only a trade that passes the test

The relevant figure is not the gross premium but **what remains after every cost**. We look past the headline rate and apply three filters.

BEFORE ENTRY

Liquidity on both sides, premium, entry and exit costs, collateral and distance to liquidation.

AFTER ENTRY

Hedge alignment, funding direction, basis movements, venue conditions and market depth.

ACTIONS

Reduce size, add collateral, rebalance or close. **The risk limit comes before the target.**

Entry threshold `premiums - costs - risk reserve > 0`

Each contract shares in the actual day's result

The strategy records the day's realised result. Each contract receives a share **k** — its reference rate divided by the strategy reference rate. Strong and weak days follow **the same allocation rule**.

```
k = min(contract reference rate / strategy reference rate, 1)
accrual ≈ principal × strategy result × k
```

Strategy · day	Contracts · k 0.80	Platform
+$6,000	+$4,800	$1,200

Two products.
Two ways to earn.

CarryLane Strategy

Term	30–120 days
Minimum	from $100
Return	1.2–1.8% per day
Source	funding and basis

Carry Option

Term	180–365 days
Minimum	from $2,500
Return	2.4–3.0% per day
Source	+ option premium

CarryLane Strategy

Hedged funding and basis from **$100**. Not a bet on rising or falling prices, but two offsetting positions: one side of the market regularly pays the other, and the strategy stands **on the investor's side**.

SOURCE 1 · FUNDING

Leveraged traders pay each funding interval. While they hold their positions, the payment stream continues.

SOURCE 2 · BASIS

The futures price is above spot. By expiry, the basis converges and the difference becomes the strategy's result.

The result is recorded **each day**.

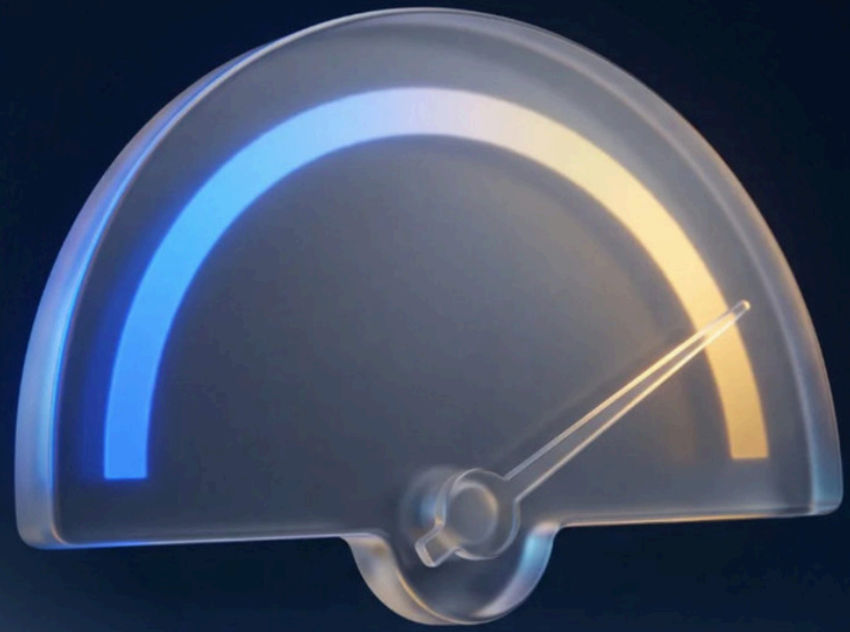

`Reinvest profit` `Roll full position` `Settle to cash`

Contract principal remains **committed until maturity**.

Carry Option

Carry mechanics plus **a sold option** — the price of protection bought by the other side of the market. Three sources of premium and **up to 3% per day**.

FUNDING
a recurring payment stream

BASIS
convergence towards expiry

OPTION
the seller receives the premium upfront

Profit becomes available through option cycles — **roughly every 90 days**, with final settlement **at maturity**.

`Reinvest profit` `Settle to cash`

180 days	365 days	Minimum
2.4% per day	**3.0%** per day	**$2 500**

Your account is protected from day one

Protection works **around the clock**, not only when you think about it.

01 Authenticator
2FA for sign-in and sensitive actions

02 Recovery
account access is not lost

03 Withdrawal PIN
a separate code for each request

04 Address allowlist
withdraw only to your own addresses

05 24-hour hold
for new addresses and setting changes

06 Responsive support
account and withdrawal help, 24/7

Withdrawals: fast, automated, transparent

Withdrawal requests are **processed automatically** once checks are complete — **without manual intervention**. The current route, fee and status are visible during the transaction.

$25
minimum withdrawal

3% → 0%
rank-based fee

Instant
USDT BEP-20

within 24h
BTC and ETH withdrawals

Ten levels in your network

Share your **ID**: an investor who enters it at registration **joins your referral network**. When they activate a contract, you earn a **reward** — a percentage of the activated amount at your level's rate.

LEVEL 1 · DIRECT REFERRALS

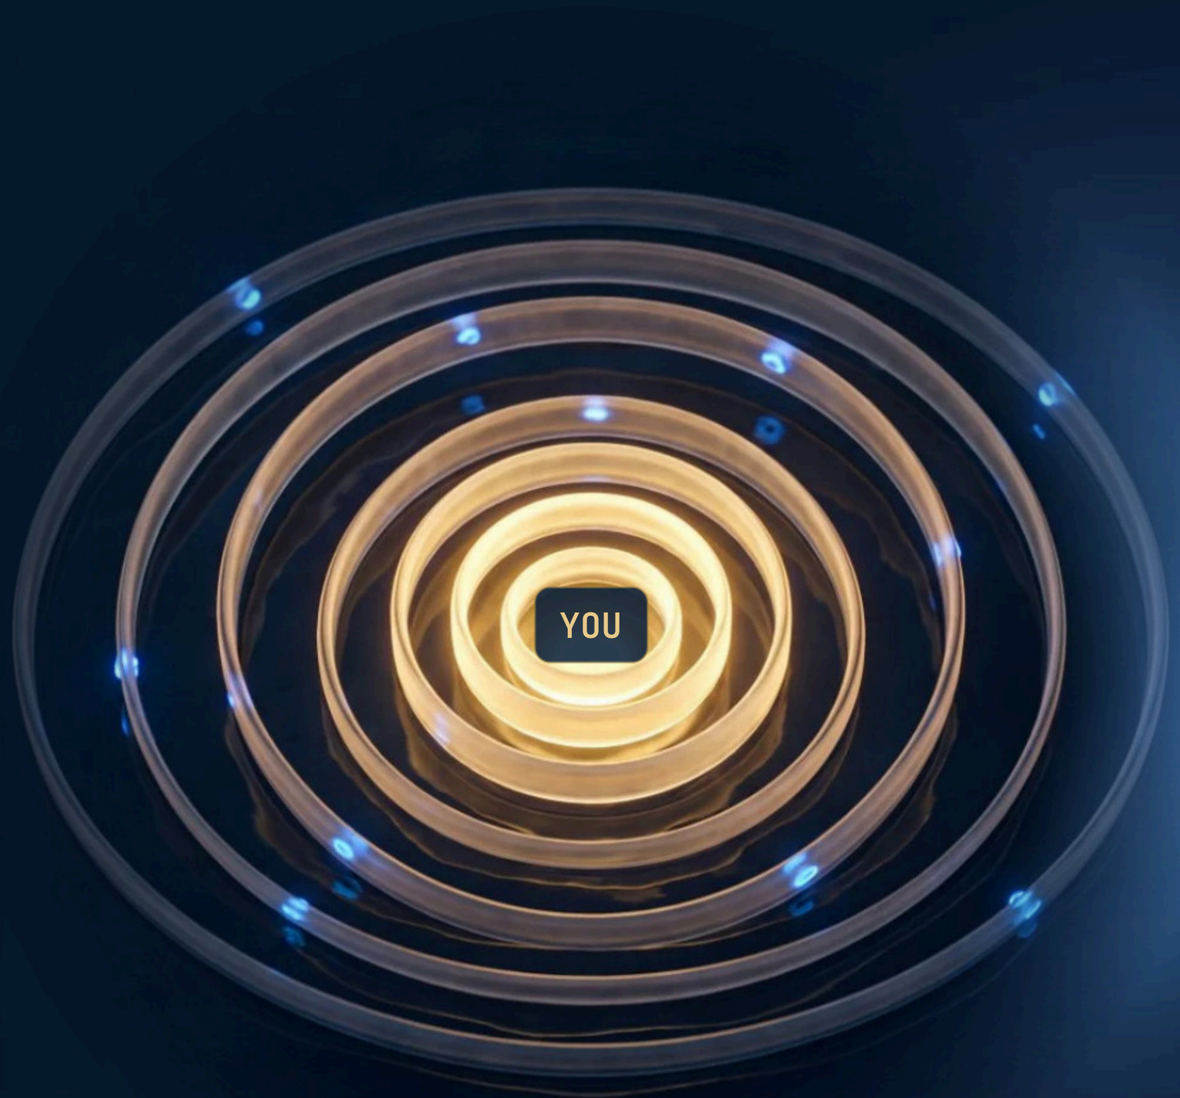

7.0% → 10.0% at Apex

LEVELS 2–5 · FROM DAY ONE

L2 3.0% · L3 2.0% · L4 1.0% · L5 1.0%

LEVELS 6–10 · UNLOCKED BY RANK

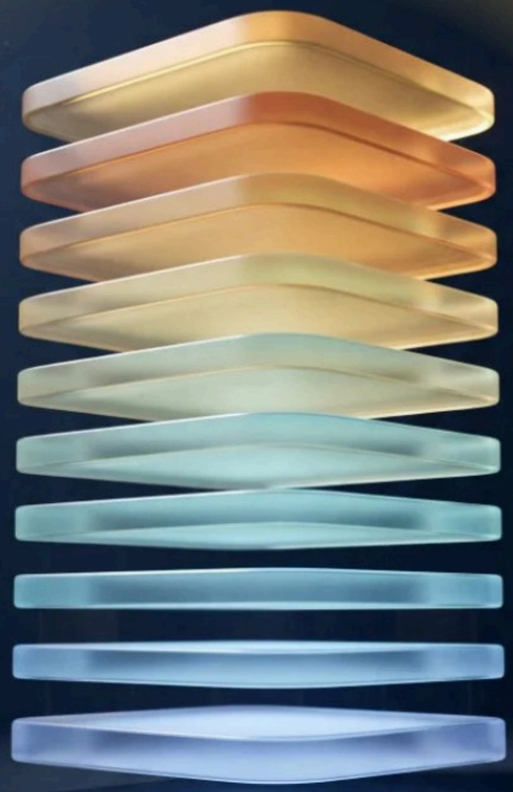

1.0% per level — from Introducer to all 10 levels at Underwriter.

The reward is paid by the platform, not from the referred investor's contract returns.

Ten ranks — a bonus at each

RANK	NETWORK VOLUME	LEVELS	LEVEL 1	BONUS
Scout	$1k	5	7.0%	+$50
Introducer	$5k	6	7.3%	+$150
Agent	$10k	7	7.6%	+$300
Broker	$25k	8	8.0%	+$500
Dealer	$50k	9	8.4%	+$1,000
Underwriter	$100k	10	8.8%	+$2,500
Market Maker	$250k	10	9.2%	+$4,500
Prime Broker	$500k	10	9.5%	+$6,000
Clearing House	$1M	10	9.8%	+$10,000
CarryLane Apex	$10M	10	10.0%	+$50,000

Network volume is the total invested by investors across all levels. Each rank bonus is paid once.

Rates by partner rank

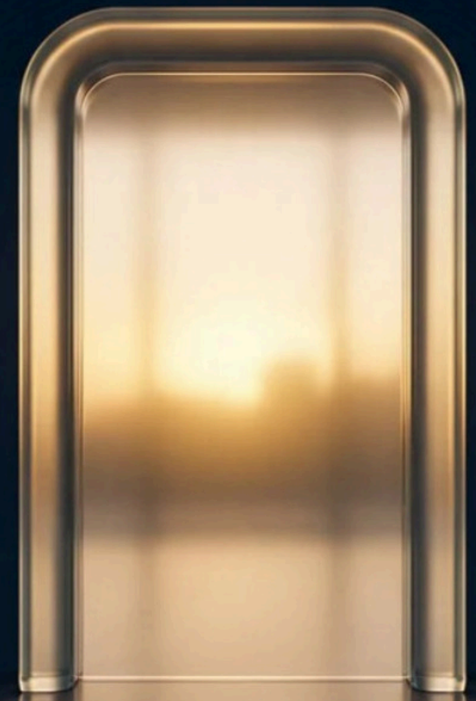

Rows show your rank at activation; columns show the investor's depth in your network; each cell is **your rate as a percentage** of the activated amount.

RANK	NETWORK	L1	L2	L3	L4	L5	L6	L7	L8	L9	L10
Unranked	start	7.0	3.0	2.0	1.0	1.0	—	—	—	—	—
Scout	$1k	7.0	3.0	2.0	1.0	1.0	—	—	—	—	—
Introducer	$5k	7.3	3.1	2.1	1.1	1.1	1.0	—	—	—	—
Agent	$10k	7.6	3.2	2.2	1.2	1.2	1.0	1.0	—	—	—
Broker	$25k	8.0	3.3	2.3	1.3	1.3	1.0	1.0	1.0	—	—
Dealer	$50k	8.4	3.4	2.4	1.4	1.4	1.0	1.0	1.0	1.0	—
Underwriter	$100k	8.8	3.5	2.5	1.5	1.5	1.0	1.0	1.0	1.0	1.0
Market Maker	$250k	9.2	3.6	2.6	1.6	1.6	1.0	1.0	1.0	1.0	1.0
Prime Broker	$500k	9.5	3.7	2.7	1.7	1.7	1.0	1.0	1.0	1.0	1.0
Clearing House	$1M	9.8	3.8	2.8	1.8	1.8	1.0	1.0	1.0	1.0	1.0
CarryLane Apex	$10M	10.0	3.9	2.9	1.9	1.9	1.0	1.0	1.0	1.0	1.0

A level not yet unlocked by your rank earns no commission until you reach the required rank.
